B.Tech –Computer Science & Engineering

ABOUT THE STUDENT

Candidate Profile

Roll Number

2410030861

Institute

IILM University, Greater Noida, U.P.

Programme

B.TechCSE, Batch 2024–2028

Internship Domain

Cloud Internship

Duration

8 Weeks | June –August 2026

ABOUT THE PROGRAM

EduSkills , AICTE & Google for Developers

The **Cloud Virtual Internship** was an 8-week learning program designed to provide practical exposure to cloud computing and AWS technologies.

The internship covered the basics of cloud computing and gradually moved towards important AWS concepts such as **networking, compute, storage, databases, security, monitoring, scalability, and high availability**.

The learning was structured around AWS Academy content, giving me an opportunity to understand how different cloud services are used to build and manage reliable cloud environments.

Cloud Computing & AWS
Fundamentals

Security & Monitoring

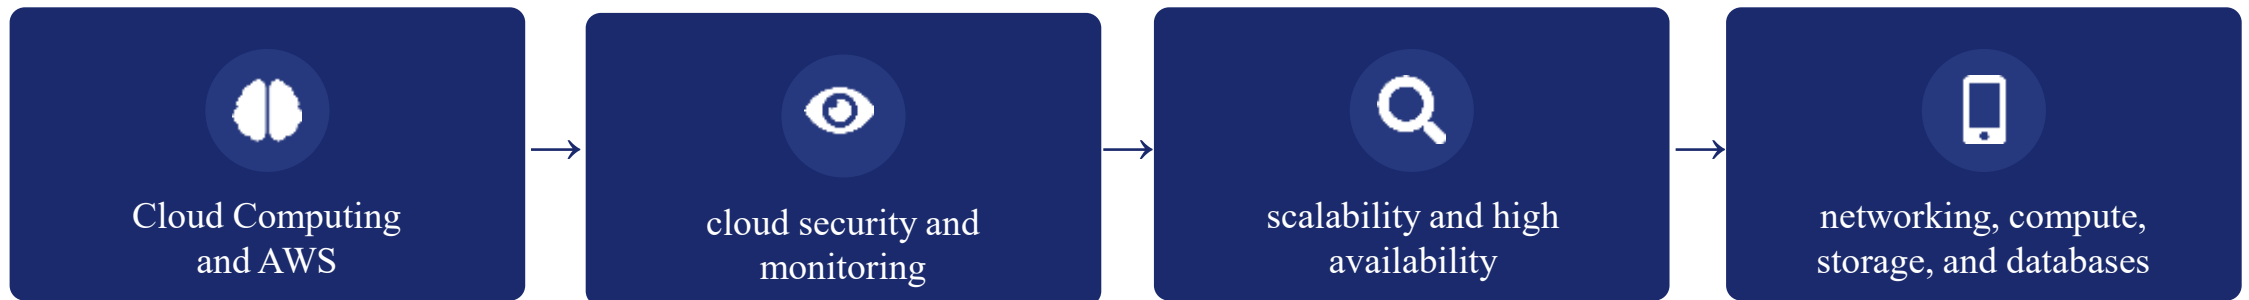

Cloud Architecture & Auto
Scaling

Bridging the Gap Between Cloud Theory and Practical Skills

Cloud computing is widely used for modern applications, businesses, and IT infrastructure, but learning cloud concepts only through theory is not enough to understand how they work in real-world environments. Students need practical exposure to how cloud services are **designed, configured, secured, monitored, and scaled** according to different requirements. The internship provided a structured learning experience to understand these concepts through **AWS-based cloud technologies and architecture**.

This internship addressed that gap by providing structured learning and hands-on exposure to **AWS cloud technologies and architecture**.

What the Internship Set Out to Achieve

Understand Cloud Fundamentals

Learn the basic concepts, benefits, and working principles of cloud computing.

Explore AWS Services

Understand the role of major AWS services used for computing, storage, databases, networking, and application deployment.

Learn Cloud Architecture

Understand how different cloud components are connected to design scalable and reliable solutions.

Understand Cloud Security

Learn the importance of identity management, access control, network security, and secure cloud environments.

Study Scalability & High Availability

Understand how cloud systems can handle changing workloads while maintaining availability and performance.

Apply Learning to Real-World Scenarios

Connect the concepts learned during the internship with practical cloud-based use cases and industry requirements.

The Toolkit Behind the Internship

Cloud Platform

Amazon Web Services (AWS)

Compute

Amazon EC2

Database & Storage

Amazon RDS & Amazon S3

Networking

Amazon VPC, Subnets, Routing

Security

AWS IAM, Security Groups

Monitoring

Amazon Cloud Watch

Scalability

Elastic Load Balancing, Auto Scaling

Content Delivery

Amazon CloudFront

Understanding an AWS Cloud Environment

Amazon S3

Stores files and other objects.

Amazon VPC

Provides an isolated cloud network for AWS resources.

AWS IAM

Manages users, permissions, and access to resources.

Auto Scaling

Helps adjust computing capacity according to workload.

Amazon CloudWatch

Monitors resources, performance, and system activity.

Security Groups

Control network access to cloud resources.

The 8-Week Learning Journey

Skills & Capabilities Gained

Cloud Computing Fundamentals

Developed a clear understanding of cloud concepts, service models, and AWS fundamentals.

AWS Services

Gained knowledge of important AWS services related to compute, storage, databases, and networking.

Scalability & Availability

Learned how concepts such as load balancing and Auto Scaling help applications handle changing workloads.

Cloud Architecture

Learned how different AWS services can be connected to create scalable and reliable cloud solutions.

Networking & Security

Improved understanding of VPC, subnets, access control, IAM, and basic cloud security practices.

Monitoring & Management

Understood the importance of monitoring cloud resources, performance, and system activity.

From understanding cloud concepts to developing a practical foundation in AWS technologies.

CERTIFICATION

Successfully Completed

Grade
O –Outstanding

Certificate ID
4785951e1681b14a4e44

Student ID
STU69cd305b1f3e71775054939

Duration
8 Weeks | June –August 2026
